- Import Contahogar 2.0

Introduction

ContaHogar 3.0 is the definitive Windows solution designed to simplify and optimize your household budget management. Behind an intuitive and user-friendly interface lies a powerful relational tool packed with advanced features to keep your finances under control.

With **ContaHogar 3.0** you can:

- **Automate your accounting:** Schedule your **Recurring Entries** so the application automatically logs your bills and receipts.
- **Plan for the future:** Design custom **Budgets** and analyze real monthly or annual deviations down to the last penny.
- **Visualize your progress:** Generate dynamic charts in various shapes and export your data lists ready to print as **PDF**.
- **Export your data:** Export your entries directly to **Excel** to work flexibly on your computer.
- **Respect your past:** Includes a smart wizard to import your entire transaction history from ContaHogar 2.0 without losing a single cent.

Main Window

In the **Main Window**, we feature a top Menu Bar providing access to different areas of the application, complemented by an icon toolbar underneath for more visual and direct navigation.

First Steps to Take

When launched for the very first time, the application will automatically create the fiscal year for the current calendar year.

- a) First, navigate to **Home -> Preferences** or click the **Preferences** icon (gear wheel) to select your preferred **Language** and **Currency**.

- b) It is **IMPORTANT to create**, if they don't already exist, the Opening Balances for both Bank and Cash, so that we can add Income or subtract Expenses from these amounts.

You can do this by creating a Concept called **OPENING** (as Income) and description: **Home Concepts** and entering your current balances.

TIP: Do not use January 1st to enter entries, as the program will always generate a **BALANCE** (Opening Balance) on January 1st for subsequent years.

The screenshot shows the 'Accounting Entries' window. At the top, there are tabs for 'Records', 'Navigation', 'Edit', and 'Information'. The 'Records' tab is active, showing a list of transactions. Below the list, there are fields for 'Accounts' (Account: BANK OF ENGLAND) and 'Concepts' (Concept: AESTHETICS). The 'Dates' section shows 'From: 01/01/2026' and 'Until: 31/12/2026'. The 'Totals' section shows 'Income: 26,613.00', 'Expenses: 1,705.00', and 'Balance: 24,908.00'. The 'TRANSACTIONS' table is as follows:

Date	Concept	Description	Amount €	Balance €	Notes	Account
02/01/2026	OPENING	Balance Cash	364.00	364.00		CAJA EFECTIVO
02/01/2026	OPENING	Balance Bank	3,569.00	3,933.00		BANK OF ENGLAND
02/01/2026	OPENING	Balance Pension Plan	15,000.00	18,933.00		PLAN PENSIONES
31/01/2026	FOOD	Food	-230.00	18,703.00		BANK OF ENGLAND
31/01/2026	SALARY	Pension or Salary	1,000.00	19,703.00		BANK OF ENGLAND
28/02/2026	FOOD	Food	550.00	20,253.00		BANK OF ENGLAND
28/02/2026	SALARY	Pension or Salary	1,000.00	21,253.00		BANK OF ENGLAND

- c) To enter transactions, go to **Entries -> View Entries** or click the **View Entries** icon (red notebook). The specific components of this window will be detailed further below. Click on **Edit -> Add (+)** button. Confirm the transaction date and press the **Tab** key to move to the **Concepts** field. Select a concept from the list; if your desired concept does not exist, click the button to the right of the drop-down menu to add your own and specify whether it is an **Expense** or an **Income**. Upon returning, it will be instantly available in the Concepts list. Detailed instructions regarding automated descriptions can be found by clicking the **Help (?)** button. Fill in the amount and move to the **Account** field; the process here mirrors the Concepts field, allowing you to add a new account using the right-hand button if needed. Finally, if you wish to add a custom annotation, type it into the **Notes** field. Click **Save & Exit** when you are done entering transactions, or **Save & New** to continue adding more entries.
- d) This represents the most common routine you will perform.

General Functions

Many windows feature the same button layout performing identical operations across the system:

- **Navigation arrows:** Move records up or down within the data grid.

- **Add (+) button:** Creates and inserts a new entry.
- **Delete (-) button:** Permanently removes a record.

- **Edit (Pencil) button:** Modifies the selected row.
- **Transfer (Crossed Arrows) button:** Inserts a simultaneous transaction (positive in one account and negative in another), commonly referred to as a **Transfer**.
- **Colored Lines button:** Allows selecting multiple rows by dragging the mouse or pressing Ctrl + Enter to filter them out visually for Reports or Charts.
- **F5 button:** Instantly filters text within the Description column.
- **F6 button:** Refreshes the grid with all entries, clearing any active filters.
- **Calculator button:** Launches the native Windows system calculator.

- **Binoculars button:** Performs precise advanced searches across columns.
- **Small Binoculars button (or F3):** Continues searching for the previously entered text query.
- **Printer button:** Previews and prints reports selected from the subsequent prompt windows.
- **Charts button:** Displays a selection of dynamic graphs in the following popup windows.

Note: These specific filtering tools are exclusive to the Journal Entries screen.

- **Pink Funnel:** Allows selecting multiple sequential concepts by dragging the mouse, or non-sequential ones via Ctrl + Enter + Drag. Once selected, press the **Black Funnel** to populate them on the grid. Press Esc to close the dropdown.
- **Black Funnel:** Filters the grid strictly by the single concept currently visible in the dropdown.
- **Crossed Funnels:** Clears the active filter configuration, resetting the view.
- **Excel button:** Exports all ledger entries currently visible on the grid directly to an Excel sheet.

- **Date Filters:** Features two calendars to filter records **From:** and **To:**. Filtering across different calendar years is strictly prohibited.
- **Clock button:** Forces the **From:** calendar to jump to the oldest historical date present in the database. After selecting the dates, press the Black Funnel to apply.

Totals		
Income:	Expenses:	Balance:
94,461.03	27,489.22	66,971.81

- **Totals Panel:** Automatically calculates and displays real-time summaries of **Income**, **Expenses**, and the **Net Balance** of the active grid view.

System Settings & Preferences

This section allows you to customize the behavior of **ContaHogar 3.0** to match your daily workflow. The control panel is divided into the following flexible management areas:

-  **Main Screen Startup:** Defines the interface behavior on launch. You can force the application to remember your last layout (**Screen according to last shutdown**) or force it to start maximized (**Full Screen**).
-  **Print Reports:** Governs the workflow of your physical data listings. It allows you to enable **Preview before Printing** to save paper, prompt for a specific hardware device (**Choose Printer**), or send the document directly to the default printer configured in Windows.
-  **Database Location & Paths:** Displays secure paths in the RAM and hard drive. All your financial records are stored locally and encrypted within your user profile directory, ensuring absolute data privacy under the secure **MSIX** deployment container.
-  **Language & Currency:** The core of our multi-language architecture. It allows switching the entire user interface in real time between Catalan, Spanish, or other languages, while adjusting the global currency symbol (€, \$, etc.) that formats your analytical grids and charts.

Once configured to your liking, simply click the **Save & Exit** button to permanently commit these directives to the system backend.

Changing the Active Fiscal Year

Fiscal Year Selection: A clean user prompt designed to segment your bookkeeping year by year. Choose the desired year from the dropdown combo box to access historical records (**Accept**), cancel the operation (**Cancel**), or deploy a brand-new blank year from scratch (**Create New**), keeping your master accounts and concepts intact.

Entering Accounting Entries

Note Data:

Date: 11/07/2026

Description 1: Deaths

Concept: DEATHS

Search Description:

Description 2: Deaths

Amount: 0 €

Account: BBVA

Note:

Quick Introduction Guide

Step 1:
Select a Concept, you will see in Descriptions 1 and 2, the one that is by default.

Step 2:
If Description 2 of the Concept is not the desired one, type in the drop-down menu, you will pass the text to "Search Description:" type at least three letters and Description 2: will open, with the words that contain the letters of "Search Description:". To go to the drop-down, press Enter and with the Arrows move through the drop-down and finish by pressing Enter to jump to the Amount.

Note:
You can go back to modify what you wrote.
In case you want to save a new description that does not exist, keep typing and as it will not find any match, it will ask you if you want to add that Text, once you pass the Text to Description 2:, you can complete it.

jol	-54.8
	-14.2
	-70.2
	-23.4
	-21.0

This is the most frequently accessed screen in the application. It includes a built-in **Help** utility detailing automated description logic. You can use the pre-loaded sample concepts or create your own custom entries. Click **Save & Exit** to commit the record and close, or **Save & New** to keep adding transactions sequentially.

Recurring Entries (Periodic Entries)

The primary layout for managing scheduled transactions is highly consistent with the Journal Entries window. To append a new automated recurring transaction, press the **Add (+)** button and follow these step-by-step fields:

Introduction of Periodic Transactions

Data from the Periodic Note:

Concept: **AESTHETICS**  EXPENSE

Description: **AESTHETICS AND HAIRDRESSING**

1st Payment: **11/07/2026**  Amount of Payments:

Periodicity: **Monthly**

Amount: 0 € 

Account: **BBVA** 

Note:

Cancel **Accept**

- Select an existing Concept or create a new one using the right-hand action button.
- Modify the auto-populated text if the Description is not to your liking; otherwise, proceed to the calendar.
- On the Calendar field, select the date of the **First Payment or Collection**.
- Under **Payment/Collection Count**, enter the total number of cycles to schedule.
- Use the **Periodicity** dropdown to define the interval (Weekly, Monthly, Annual, etc.).
- Input the financial **Amount**.
- Choose the destination **Account** for the payout or deposit.
- Optionallly, write an annotation in the **Notes** box and click **Accept**.
- *Automated Ledger Background Sync:* Every time **ContaHogar 3.0** launches, it scans the Recurring Entries database. If any scheduled entry is due on or before today's date, the relational engine transfers it to your main Journal Entries ledger and safely removes it from the pending schedule queue.

Periodic Transactions

Records: Rec.: 6 (Unfiltered)    

Accounts: Account: **BANK OF ENGLAND**

Budgets

Forecasting and Planning: The key to financial health is planning for the future, not just tracking past expenses. In this window, you can define in advance your **Income** targets (savings goals or salaries) and your **Expenses** caps (food, leisure, utilities) for the accounting concepts of your choice. The application automatically analyzes the data for you, cross-referencing your budget against actual journal entries to offer a clear real-time balance sheet. This smart view highlights monthly deviations instantly, showing you whether you are meeting your milestones or if you need to adjust the course of your household economy.

Entering Budgets by Concepts

Introduction of Budget by Accounting Concepts

Accounting Concepts:

Concept: LIGHT EXPENSE

Description: Light Company

Budget Distribution:

☐ Distribute the annual amount in equal parts in each month.

☒ Distribute different amounts in each month.

Annual Distribution:

Annual Total: 1,200.00 €

Monthly Distribution:

January: 100.00 €	July: 100.00 €
February: 100.00 €	August: 100.00 €
March: 100.00 €	September: 100.00 €
April: 100.00 €	October: 100.00 €
May: 100.00 €	November: 100.00 €
June: 100.00 €	December: 100.00 €

Cancel **Save and Exit**

To adapt to the real rhythm of your home, **ContaHogar 3.0** offers three elastic and smart methods to calculate your plans:

- 💰 **Symmetric Monthly Distribution:** Enter a fixed monthly amount and the program will automatically replicate it month by month in a homogeneous way (ideal for rent, car payments, or fixed subscriptions).
- 📅 **Automated Annual Calculation:** If you know how much you want to spend in total per year, enter the gross figure and the application will divide it equally among the 12 months in a millisecond.
- 📊 **Variable Seasonal Planning:** Because not all months are equal, this mode gives you absolute freedom to enter **different amounts for specific months**. Allocate a larger budget for holiday months, back-to-school season, or the winter heating campaign.

Once saved, the relational engine of **ContaHogar 3.0** will cross-reference this data with your actual entries in the Journal, displaying your deviations graphically and instantly so you never exceed your threshold.

- 💡 **Practical Tip for the User:** *"We recommend using the variable amounts method for concepts like 'Electricity' or 'Gas', assigning a higher margin in winter and summer months, which is when bills usually spike".*
- 🔒 **Data Security (MSIX):** *"All your budget planning and transaction notes are stored locally and encrypted within your secure 'My Documents' folder, guaranteeing absolute privacy of your financial goals away from the cloud".*

Smart Budget Deviations Management

Budget Deviation

Records: Rec.: 12 (Filtered) Exit

Edit Information F6 Navigation

Concepts: Concept: SALARY Pension or Salary

FOOD	December	0.00	500.00
TOTAL		350.00	6,000.00

Partial Deviation up to June = -10.00 €
Goal NOT achieved!

To ensure professional-grade financial auditing, **ContaHogar 3.0** processes your records using bidirectional relational logic based strictly on the concept's account type:

-  **EXPENSE Concepts (Savings Ceilings):** The goal is to remain underneath the budget threshold. The deviation calculation displays your remaining margin (Budget minus Actuals). Exceeding the ceiling shifts the net value to negative, triggering a red visual alert: **"Objective Not Logged!"**.
-  **INCOME Concepts (Revenue Targets):** The logic inverts completely. The goal is to meet or exceed the planned milestone (salaries, pensions). The deviation calculates your earnings gap (Actuals minus Budget). Falling short of the revenue goal displays a negative amount, turning the badge red to report that the target was not reached.

 Year-To-Date (YTD) Temporal Synchronization

The analytical tracking engine prevents seasonal data distortions when querying different eras of your financial timeline:

- **Closed Historical Years:** When viewing a past fiscal year, the system evaluates all **12 months completely** as a closed book.
- **Current Year in Progress:** When monitoring the active year, the system calculates totals **strictly up to the previous calendar month**, preventing unstarted future months from throwing off your real variance percentages.

Monday, July 13, 2026

Automated Backup and Restoration

The security of your financial data is our highest priority. To guarantee that you never lose your valuable accounting history in the event of any unforeseen incident, computer crash, or accidental error, **ContaHogar 3.0** features an advanced protection and rescue system with total permission immunity under the Microsoft Store standard.

How to Create a Backup

It is highly recommended to generate regular backups of your accounting records. The process has been fully automated to ensure it is fast, dócil, and seamless:

- Upon pressing the button, the program opens the official Windows File Explorer, pointing directly to the secure storage vault: **My Documents\ContaHogar_Backups**.
- The relational engine automatically calculates and generates a unique filename that includes your exact date and time (e.g., *ContaHogar_Backups_PRE_MIGRATION...*).
- The user does not need to type anything; **just a single click on "Save"** is enough to shield your historical data in a millisecond.

How to Restore a Backup (Restore)

If you need to recover your past transactions on a new computer or revert to a previous state, the restoration wizard will guide you infallibly:

- When activating this option, the application will seamlessly open the selection window in your official backups folder.
- Thanks to the built-in Windows firewall protocols, the program will verify that the selected file is legitimate and actually exists on the hard drive.
- Once accepted, **ContaHogar 3.0** will securely overwrite your active production database and close cleanly to reset the memory threads. Upon restarting the program, you will wake up with your entire history gleaming, balanced, and ready for work.

System Utilities and Maintenance

- **Compact Database (One-Click Optimization):** With daily use, inserting, and deleting records, relational databases tend to accumulate residual space or digital clutter. The compacting tool reorganizes data pages within the RAM in a millisecond, reducing the file to an absolute blank canvas text of just **488 KB**. Your queries, lists, and charts will run at lightning speed, fully immune to permission locks under the **MSIX** container.
- **Empty Database (Financial Reset):** Designed for situations where you want to kickstart your household accounting from an absolute clean slate (for testing purposes or beginning a new cycle). It executes a massive physical wipe of the database. For security, it extracts transactions and receipts first before cleaning the master records, **always respecting the factory-default structure of accounts and concepts**. The app will reboot completely clean and ready to open.
- **Download Help Files:** Allows decoupling heavy documentation from the main installer to keep the MSIX package lightweight. The program connects securely to our servers to **download the latest version of the digital help manual** directly to the user's local profile for offline consultation.
- **Download Version History File (Changelog):** A utility to download the historical logs from the development log. You will be able to audit the software's evolution, including the multi-language implementation, the Math.Abs() method, the conversion of numeric IDs, and all improvements applied for the store.

- **"About..." Window:** Official presentation window. The user will find the support email for queries and suggestions, the development author, and the official production version number (**v3.0.0**), certifying that it is an original, verified product.
 - **Import ContaHogar 2.0 (The Smart Bridge to the Past):** The high-engineering relational engine reads the old cloned CHDB2.mdb file in real-time and performs a smart row-by-row scan:
 - If it detects a transaction whose concept does not exist, it travels back to the clone's table, **extracts its real nature (EXPENSE or INCOME)**, and registers it into the modern master list, respecting its spelling and language 100%.
 - It modifies old duplicate texts by forcing them into pure uppercase and maps each movement to the new **integer numeric IDs** of **ContaHogar 3.0**.
 - Within seconds, it transforms years of legacy entries into a perfectly symmetric, dócil structure, fully compatible with the analytics of **ContaHogar 3.0**.
-

We hope you enjoy ContaHogar 3.0- Thank you!
